DESCRIPTORS: *Quartz, Minerals, Rock, *Geology, Sedimentation.

The average total content of fragmental quartz in the rock of the productive layer of Apsheron Peninsula according to the analytical data of the petrographic laboratories of Azerbaidzhan (average of 878 determinations) is considerably lower than was formerly assumed, amounting to 48.6% in the predominant silty fraction. The content of fragmental feldspars averages 31.9%. (Earth Sciences--Geology, TT, v. 9, no. 3) (over)
